Marx on Economic, Political and Pamphlets for Science and Retail Sector (1846 – 79, including Paris Commune)

Table of Contents

I. Scientific Planning and Technical Organisation of Scientific formalism
II. Scientific knowledge and education, just

follow science instead of Marxism – Marxism just means following quantitites – science is true surreal even quality

III. Science is the correct way of following the world – it is like the highest experience of a novel, or even inventions which are scientific will help follow science

IV. Marx is only about economics – following the process of retail, and even forms of companies, and computers and fragments like that on machines – but science is about the process of inventions, and how they work instead – how they work is software perhaps – study its syntax –

and it helps America argues

V. Forms of labour and ratios of finance and commerce in this world of retail

VI. Retail and science go hand in hand with in fact forms of orreys

VII. Forms of technical organization as different cultures – Spain is different from Cuba

VIII. How to strengthen the profit dynamic is based on Education perhaps but also wage repression and unions matter, finally public sector and state matter

I. Forms of Pamphlets

Marx here, I keep writing pamphlets like this -

“Perhaps we love science, instead of this plundering and looting by capital and state, parliaments, they even defy the scientific education of the poor or intellectuals, where is the Jewish Torahnic education policy?”

I also write in fact –

“Scientific knowledge then allows us to understand how

inventions are shaping the world – even printing shops and printing newspapers, and such news on the onset of modernity and science.”

I write further for Engels to edit –

“Science means perfection, if educated people loved science, they would live well – Jewish Israel will find a

Prophet who takes us back to Soviet planner bureuacrats and is a revolution for Israel in India – I predict because I know Judaism. Science is how they live forever.”

Friedrich Engels

I. Scientific planning and plans of society – types of scientific commodity types –

like automobiles and even putting out and factory system.

II. Technical organization of society

III. Education in Crisis – Jewish reflections

IV. Following only the science part (economics builds on science – economics is the process coming out of pure retail trade

and Spinozan worlds which is manuscripts – the other side is of course companies and their accounts as America argues, thanking them for following Finance in their world)
